Summary

Final-year Computer Science undergraduate at the University of Moratuwa with strong foundations in software engineering, distributed systems, and cloud-native application development. Hands-on experience in backend engineering, full-stack systems, CI/CD, containerization, Kubernetes, infrastructure as code, observability, and secure system design. Interested in building reliable, scalable, and maintainable systems, with a proven record of academic excellence and strong project execution.

Education

- | | |
|--|----------------|
| University of Moratuwa , BSc (Hons) in Computer Science and Engineering | 2023 – Present |
| • CGPA: 3.7 (6 semesters); Dean's List (Semesters 1–3) | |
| Maliyadeva College, Kurunegala , Physical Science (A/L) | 2019 – 2022 |
| • Subjects: Mathematics A, Physics A, Chemistry A | |
| • Achieved a Z-score of 2.5805 and an island rank of 93 | |

Experience

- | | |
|---|---------------------|
| WSO2 , Software Engineering Intern | Nov 2025 – May 2026 |
| Drove the research and design of Application Federation for WSO2 API Manager (4.6 to 4.7), extending the product to manage APIs deployed on external gateways such as AWS, Azure, and Kong through a unified control plane. | |
| • R&D and Design: Explored three architectural approaches across successive iterations, defending each in design reviews with senior engineers and a director, and converged on a tradeoff-driven federation model | |
| • Federated API Keys: Designed federated credential issuance and subscription mapping between WSO2 usage plans and remote gateway constructs | |
| • Product Engineering: Extended a large, fast-moving codebase spanning the Publisher, Developer Portal, Admin Portal, and API Gateway, with data and API modeling for a real feature | |
| • Release Testing: Found and filed reproducible product defects during federation release testing, including an Azure federated-deployment failure for API names with spaces and a discovery-path name-validation mismatch against the deploy path | |

Projects

- | | |
|---|---------------------|
| KubeStock: Cloud-Native Inventory Management System
<i>GitHub Repository</i> | Oct 2025 – Feb 2026 |
| Designed and deployed a cloud-native inventory and stock management platform through a full CI/CD workflow onto Kubernetes infrastructure, with emphasis on automation, observability, scalability, and zero-trust security concepts. | |
| • CI/CD and GitOps: Implemented automated delivery using GitHub Actions and ArgoCD for Kubernetes-based deployments | |
| • Infrastructure as Code: Provisioned infrastructure using modular Terraform | |
| • Scalability and Reliability: Built deployment workflows with auto-scaling and high-availability patterns | |
| • Observability: Implemented monitoring with Prometheus and Grafana , and centralized logging with Loki | |
| • Security: Applied zero-trust concepts across application and infrastructure layers | |
| Event Ticketing & Seating Platform (Microservices Architecture)
<i>GitHub Repository</i> | May 2025 – Nov 2025 |
| Engineered a distributed platform for event creation, seating management, and ticket sales, designed for high performance, scalability, and reliability. The project received an A+ grade. | |

- **Architected a CQRS and Event-Driven System:** Implemented CQRS with PostgreSQL for command-side persistence and MongoDB for denormalized read models
- **Streaming and Consistency:** Used **Debezium** for CDC and **Kafka** for transactional event propagation
- **Performance Engineering:** Leveraged **Redis** for distributed locking and service-level caching to improve consistency and reduce latency
- **Polyglot Microservices:** Core business logic implemented in **Spring Boot**; high-concurrency worker implemented in **Go**
- **Automated Scheduling and Security:** Used **AWS EventBridge Scheduler**, **SQS**, **Keycloak**, and **Spring Cloud Gateway WebFlux**
- **Deployment:** Containerized with **Docker** and designed for **Kubernetes** deployment with **Terraform**

AI-Powered Stock Screening & Risk Analysis Platform

Jan 2025 – Apr 2025

[GitHub Repository](#)

Designed, developed, and deployed a multi-layered risk analysis platform, handling backend development, CI/CD, and cloud infrastructure.

- **CI/CD Pipeline:** Built **GitHub Actions** workflows for build, test, and deployment on main branch pushes
- **Frontend Development:** Built with **Next.js** using Server-Side Rendering (SSR) for improved SEO and initial load performance
- **Data Ingestion & Analysis:** Used **yfinance** for market data and **Google Gemini API** for sentiment analysis

Patient and Inventory Management System (Freelance)

Dec 2024 – Mar 2025

[GitHub Repository](#)

Architected, developed, and deployed a secure, high-performance patient management system for a freelance client.

- **Secure AWS Cloud Architecture:** Designed a multi-tier network with public/private subnets, bastion host access, and isolated PostgreSQL deployment
- **Containerized SSR Deployment:** Deployed a **Next.js** SSR application in **Docker** on **AWS EC2**
- **Automated CI/CD:** Built a **GitHub Actions** pipeline for build, test, and deployment
- **Application Security:** Implemented RBAC and JWT-based authentication

Technologies

DevOps & Cloud: Docker, Kubernetes (K8s), Terraform, Ansible, GitHub Actions, ArgoCD, Prometheus, Grafana, Loki, AWS, Bash

Backend: Spring Boot (MVC and WebFlux), Node.js, Express, FastAPI, RESTful APIs

Databases & Messaging: PostgreSQL, MySQL, MongoDB, Redis, Kafka

Frontend: Next.js, React, TypeScript

Programming Languages: Java, JavaScript, Python, Go

Operating Systems & Tools: Linux, Git

Certifications

Linux Systems Administration and DevOps Engineering – WSO2

Issued Mar 2026

Completed training in Linux administration, networking, virtualization, Docker, Kubernetes, infrastructure as code, log management, security concepts, Zero Trust Architecture, IAM, Ansible, platform engineering, IT law, business continuity, and disaster recovery.

GitHub Foundations

Issued Feb 2025

[View Credential](#)

Introduction to Front-End Development – Meta

Issued May 2024

[View Credential](#)

Extra

- **Cloud-Native and DevOps Exposure:** Hands-on work in CI/CD, Kubernetes, IaC, observability, and secure infrastructure design through academic, training, and project work
- **Kubernetes Proficiency:** Experience with cluster setup, deployments, scaling, monitoring, and service orchestration
- **Active GitHub Contributor:** Strong record of continuous hands-on development and project-based technical work
- **Communication and Collaboration:** Able to communicate technical ideas clearly and work effectively in team-based engineering environments
